

*Support biodiversity*

VIRIdiVITA herbs, the local seed mixture, supports and promotes biodiversity. Natural plant communities with complex interactions between plant species, soil and climate develop over the course of many years or centuries. The use of local mixtures emphasizes the ecosystem.

**extensive habitats – local – biodiverse**

# VIRIdiVITA herbs

**purpose:** - provide nature with native, sustainable roof herbs for more biodiversity  
provide

**function:** - native seed mixtures with seed helpers can withstand extreme weather  
weather conditions and adapt to constantly changing climatic  
climate conditions

**advantages:** - ecotypes originate from the natural habitat  
- individual consideration of microclimatic conditions

**variation:** - type A: Growth height up to max. 20 cm, seed quantity: 10gr/m<sup>2</sup>  
- type B: Growth height up to max. 50 cm, seed quantity: 10gr/m<sup>2</sup>

*Sedum album*  
white stonecrop

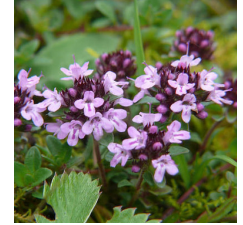

*Sedum acre*  
pungent stonecrop

*Sedum sexangulare*  
mild stonecrop

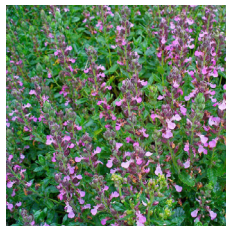

*Alyssum alyssoides*  
goblet weed

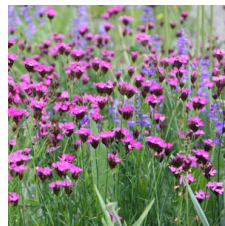

*Thymus praecox*  
field thyme

*Teucrium botrys*  
grape chamomile

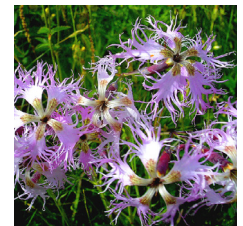

*Teucrium chamaedrys*  
precious gamander

*Dianthus carthusianorum*  
carthusian carnation

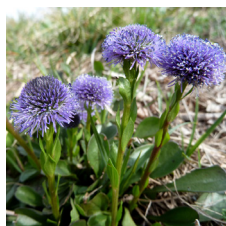

*Dianthus sylvestris*  
rock carnation

*Dianthus superbus*  
carnation

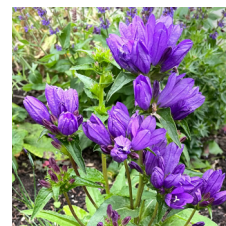

*Veronica spicata*  
honorary prize

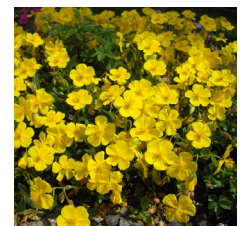

*Globularia bisnagarica*  
ball flower

*Campanula cochleariifolia*  
bellflower

*Campanula glomerata*  
clustered bellflower

*Helianthemum nummularium*  
un rose
